

CURRENT GUIDE · 9 OCTOBER 2026

GreenOps Hackathon Portal

A practical, up-to-date guide for participants, attendance coordinators, and administrators.

GreenOps: Enterprise AI using Spring Boot & Microservices

School of Computer Science Engineering and Information Systems
VIT Vellore · 10–11 October 2026

LIVE PORTAL

<https://vit-hackathon-portal.pages.dev>

The portal is the shared source of truth for team details, attendance, assigned challenges, and project links.

Replaces older portal walkthroughs. Passwords and private credentials are intentionally not printed in this guide.

01 · QUICK START

Choose your portal role

Use the role assigned to you. The admin and attendance coordinator are separate access levels.

Participant

Open the portal and sign in using your team's shared primary email and primary contact number.

Challenge

Team roster

Submission

Attendance

Choose **Coordinator Login**, then **Attendance Coordinator**. Sign in with the separate attendance password.

Check-in only

Administrator

Choose **Coordinator Login**, then open the admin dashboard using the private admin password.

Full management

Keep these credentials separate. Participants use their team's primary email and contact number. Attendance coordinators use their shared coordinator password. Administrators use the admin password.

What the portal currently handles

- Team registration records, student rosters, unique shared team login details, and team-to-question assignments.
- Individual present/absent check-in with automatic synchronization across open coordinator laptops.
- Participant challenge access and a shared team submission containing Google Drive and GitHub links.
- Administrator controls for attendance-password setup, participant login schedules, and immediate access pause/resume.
- Admin review and Excel export of submissions.

Event at a glance

Dates	Saturday 10 and Sunday 11 October 2026
Venue	Silver Jubilee Tower, Sarojini Naidu Gallery, VIT, Vellore
Registration	Begins at 08:00 AM; closes at 09:00 AM on 10 October
Problem disclosure	09:30 AM on 10 October
Final project links	Development completion and document/GitHub submission by 09:30 AM on 11 October

The portal enforces the participant login window configured by an administrator. Confirm that the saved window matches the event deadline; the event timetable alone does not configure the portal.

02 · PARTICIPANT ACCESS

Sign in and work as a team

1 Open the participant portal

On the home page, enter the **team's primary email** and **team's primary contact number** from registration. Both fields are required.

2 Use the shared team credentials

These two credentials are shared by the team; any member can sign in. Email matching ignores letter case and phone matching ignores spaces and punctuation. Register numbers and the form's Username are not login credentials.

3 Check the present-member roster

The workspace lists members that an attendance coordinator has marked present. The full team roster remains available to administrators.

4 Read the assigned challenge

All members share the team's assigned problem statement. If a coordinator has just published or assigned it, use **Refresh team view** in the challenge panel.

5 Submit both project links

Enter a shareable Google Drive document URL and the team's GitHub repository URL, then select **Submit project links**. Any member can update the team's shared submission.

Attendance is required for participant access. At least one person on the team must be marked present before a team can sign in or submit. If everyone is absent, ask an attendance coordinator to check in a member.

What's shared, and what's personal?

Shared by the team	Local to your browser
Login details, registration record, present roster, assigned problem, and project links	Search/filter terms and the current browser session

Team registration details are shown once in the shared-details section; empty fields are omitted. Only members marked present appear in the participant roster.

Event-specific reminders

Submission target shown in the portal: **11 October, 09:30 AM**. Make sure the Google Drive link can be opened by evaluators and the correct source is in GitHub. The administrator's configured access window controls whether portal sign-in and submission are accepted.

03 · ATTENDANCE COORDINATOR

Check in each participant

Coordinator access is intentionally limited to the team check-in roster and attendance status.

- 1

Open the attendance screen
Choose **Coordinator Login** on the portal, then select **Attendance Coordinator**. Enter the separate coordinator password supplied by the administrator.
- 2

Find the correct person
Use **Find team or participant** to filter by team name, team number, participant name, or register number. The filter affects only your screen.
- 3

Verify identity, then mark attendance
Match the participant to their name/register number and select **Mark present**. A successful update changes the server record; the same button can correct a mistaken status.

Five laptops share one attendance roster. Each open coordinator screen refreshes from the server every 3 seconds. Check **Last synced** beneath the page title. The Present, Absent, and Total counts are based on the full roster, not the search results.

What each role can see

Role	Roster view	Can change
Attendance coordinator	All teams and members	Present/absent status only
Participant	Only members marked present	Team project links
Administrator	Complete teams and roster	Team, problem, access, and submission management

On-site workflow

- Leave the attendance page open and keep each laptop connected to the internet.
- When one coordinator marks a person present, the other devices pick up the shared status on their next refresh (normally within 3 seconds).
- A filter, scroll position, or browser window belongs only to that laptop; attendance itself is shared.
- Use **Sign out** when finished or when handing a laptop to someone else.

If devices disagree: read the Last synced time and any displayed error, restore internet access, then reload and sign in again if the session is no longer current. Verify the person's status after the next sync; do not submit repeated toggles without checking the saved state.

Automatic refresh is polling, not an instant push. A slow network or API response can delay the update beyond 3 seconds.

04 · ADMINISTRATOR ACCESS

Set access and coordinator credentials

The administrator dashboard contains full management tools. Keep the admin password private and use a separate attendance password.

1 Open Coordinator Login

Choose **Coordinator Login** on the portal and enter the administrator password to open the dashboard.

2 Configure attendance access

In the **Login window** settings card, enter a separate attendance password (8–72 characters) and save settings. If a password is already set, leave this field blank to keep it; enter a replacement only when intentionally changing it.

3 Share the attendance password with check-in staff

Give it only to designated attendance coordinators. Their interface permits individual check-in updates, not full admin access.

Participant login controls

Setting	How it behaves
Manual access	With no start/end time set, use the checkbox to enable or disable participant access; save to apply changes.
Scheduled access	Set a start and/or end time. The schedule determines whether participant login is open; save the settings.
Pause access now	Immediately closes participant access, regardless of the saved schedule or manual setting.
Resume access now	Removes the immediate pause and returns to the saved schedule or manual setting.

Verify the deadline configuration. The event schedule lists the final submission time as 11 October at 09:30 AM. The application checks its configured participant access window for both sign-in and submission; an event timetable shown to users does not itself set that window.

Security and handover

- Do not put admin or attendance passwords in this document, spreadsheets, screenshots, source control, or messages visible to participants.
- Admin credentials are kept in browser memory for the active dashboard; sign out when finished. Attendance coordinators should also sign out before handing off a laptop.
- Attendance passwords are stored by the server as password hashes. Admin and attendance passwords must be different.
- Changing the attendance password requires coordinators to sign in again with the new one.

The portal keeps the full attendance record server-side; coordinator laptops do not have separate authoritative copies to reconcile.

05 · TEAM MANAGEMENT

Load and maintain the roster

Open the team tools from the authenticated admin dashboard. You can import the existing teams in bulk or manage them individually.

Import a roster

1. Download the CSV template from the team import dialog.
2. Fill recognized columns and save as CSV or Excel workbook.
3. Choose the file and import. Read any validation error before retrying.

Create a team manually

Use the create-team form when only a few records need entry. Provide the required primary contact number and primary email; enter member name/register number pairs together.

Import requirements you must know

- Headers are matched by name, so recognized columns can be in any order. Unrecognized columns are ignored.
- Primary contact number and primary email are required for every team. Other registration fields are optional.
- The primary email and contact number must each be unique across teams. Duplicate values within an import or already assigned to another team reject the whole import; no partial upload is saved.
- Participant register numbers must be unique. Provide a leader's name and register number together, or leave both empty; member names and register numbers are also entered as pairs.
- Use the team's primary email and contact number for participant sign-in; do not use a register number or the form's Username.

Check the import before the event. Preview/verify the spreadsheet headers and contact details, then confirm the teams and member count in the dashboard. A successful import does not mean participants have been checked in.

Individual roster actions

Use the team controls to inspect the full roster and make corrections, including editing team registration details, renaming a team, adding or editing a participant, changing the leader, or deleting a record.

- Editing imported registration fields also updates the linked student roster.
- Assign a new leader before deleting the current team leader.
- Deleting a team removes its participants. Bulk-clearing teams is destructive and requires a double confirmation.
- The administrator sees all roster members and their present/absent status; participants see only present members.

Available registration details

The import template includes timestamp and username, leader and member names/register numbers (up to four members), primary contact and email, programme, specialization, institution, payment reference, institute name, city, and state. Only primary contact and email are mandatory.

06 · PROBLEM LIBRARY AND ASSIGNMENT

Prepare and publish challenges

The problem library stores challenge statements. Team assignments and participant visibility are separate: a team must have an assignment, and that problem must be enabled.

1 Add or import problem statements

Create an individual problem with a title and statement, edit it later, or import the prepared question CSV from the library controls. Import validation is all-or-nothing.

2 Assign to teams

Choose a problem for each team. The same problem can be assigned to multiple teams. The even random assignment action fills only teams that are still unassigned and preserves existing assignments.

3 Enable when ready for participants

Use the problem's visibility control to enable or hide it. The library can enable/disable all problems. A disabled problem remains unavailable to participants even if assigned.

4 Tell participants to refresh their challenge

After assigning or publishing a problem, participants who are already signed in can use **Refresh team view** to load the latest team roster and challenge.

Before disclosure: verify each team's intended assignment and keep the corresponding problem disabled until it is ready to be shown. Enabling a problem makes it visible to teams assigned that problem.

Assignment checklist

- [] Every expected team appears in the team list.
- [] Each problem has the correct title and complete statement.
- [] Teams are assigned to the intended problem; shared assignments are intentional.
- [] Problems are disabled until authorized disclosure.
- [] Participants are told to refresh if already logged in when a challenge is published.

Deletion and bulk actions

Editing preserves a problem's identity; deleting it removes it and clears its team assignments. Clearing all problems removes the problem library and team assignments. Bulk deletion prompts for confirmation and cannot be treated as a reversible edit.

Participant-side result

Every authenticated member of a team sees the same enabled assigned statement. If no statement appears, check that the assignment exists and the problem is enabled, then refresh the team view.

07 · PROJECT SUBMISSIONS

Submit and review team links

For participants

1. Make sure at least one team member is checked in.
2. Sign in with the team's shared primary email and contact number.
3. Enter both a valid web URL for the Google Drive project document and a valid web URL for the GitHub repository.
4. Submit the project links and wait for the saved confirmation.
5. Return later to update either link if the team changes its final materials.

For administrators

1. Review the Team submissions table in the dashboard.
2. Open the document and repository links to check that they are accessible.
3. Use Download Excel to export the current submissions.
4. Use Clear all only when intentionally removing every submission.

One submission per team. Any team member who signs in with the shared team credentials can create or update the same team submission. An update replaces that team's saved links; it does not create a second team entry.

Submission fields and access

Field	Requirement	Review tip
Project document	Google Drive URL required	Check the document's sharing permissions for evaluators.
Source code	GitHub repository URL required	Verify it is the intended repository and the required code is committed.

The dashboard displays the team/group, document link, GitHub link, and last-updated time. Submissions refresh automatically in the open admin dashboard approximately every 30 seconds.

Do not assume a displayed deadline is a portal logout. Portal acceptance follows the administrator-configured participant access schedule/pause setting. Confirm that the access window is configured correctly before submissions open and close.

Protect records

- Export the submissions workbook when an offline copy is needed and store it in an approved location.
- Clearing submissions removes all saved links and requires a double confirmation. Download and verify an export first if a backup is needed.
- Keep exported workbooks and registration details private; they contain participant information and project links.

08 · QUICK TROUBLESHOOTING

When something does not look right

What you see	Check this	Next step
Participant login is rejected	Correct primary email/contact; a member is present; participant access window is open.	Ask the coordinator to verify check-in. Ask the admin to confirm access settings.
Participant is missing from team workspace	Member's attendance status.	Mark present at check-in, then wait for auto-sync or sign out and back in.
Challenge is not displayed	Team assignment and problem enabled status.	Enable the assigned problem and select Refresh team view.
Another coordinator laptop shows old status	Network, active sign-in, displayed error, and Last synced time.	Wait for sync; reload and sign in again if needed. Confirm status after reload.
Team import fails	Required primary email/phone; duplicates; member name/register pairs; recognized headers.	Correct the sheet and retry; failed imports are not partially saved.
Submission will not save	At least one member is present; access window is open; both links are valid web URLs.	Correct links or ask the admin to check the configured access window.
Admin or coordinator password fails	Right role, current password, and spelling.	Contact the administrator. Never ask participants to share admin credentials.

Suggested event-day opening checklist

- [] Administrator signs in and confirms teams, student roster, login schedule, and challenge assignments.
 - [] Attendance password is set separately and shared only with check-in coordinators.
 - [] All coordinator laptops can sign in and show the same total roster.
 - [] Do a test check-in with an authorized test participant and confirm it appears on another coordinator laptop; restore the intended test status afterward.
 - [] Confirm challenge visibility at the intended disclosure time.
 - [] Confirm participants can submit before the configured portal access window ends.
 - [] Export a final submissions workbook and protect it as participant data.
- Escalation:** record the affected role, team/member, approximate time, and visible error. Do not include passwords or private participant data in screenshots or public issue reports.

Current portal: <https://vit-hackathon-portal.pages.dev>
Current guide: Updated 9 October 2026 to match the current participant, administrator, and attendance coordinator flows. Keep the access schedule and event dates aligned with organizer decisions.
