

GREENOPS

CLIENT HANDOFF GUIDE

How to use the portal

A practical guide for coordinators and participants

EVENT

GreenOps : Enterprise AI using Spring Boot & Microservices

10-11 October 2026 | VIT Vellore

LIVE PARTICIPANT PORTAL

<https://vit-hackathon-portal.pages.dev/>

Use this guide to sign in, publish challenges, manage teams,
and check project submissions. No passwords are printed here.

QUICK START

Admin: prepare teams + questions, assign, then publish.

Participants: sign in, review the challenge, submit as leader.

Participant guide

Sign in with your own details, view the team challenge, and submit from the leader account.

1. OPEN THE TEAM WORKSPACE

- Open <https://vit-hackathon-portal.pages.dev/> in a current browser. The landing page opens on the participant sign-in form.
- Enter the team registration username supplied for your team, then enter your own VIT register number. Each participant signs in with their own register number.
- Select Enter team workspace. Check that the team name, team number, your details, and member list are correct.

2. READ YOUR ASSIGNED PROBLEM

- The challenge card displays the problem statement assigned to your team. Teammates on the same team see the same assigned challenge.
- If it says Not published, the coordinator may not have assigned a challenge yet, or the problem may still be hidden. Ask the coordinator to check both assignment and publication.
- After the coordinator makes a change, select Refresh challenge to reload the current assignment. Sign out when finished on a shared device.

3. SUBMIT THE PROJECT LINKS

- Only the designated group leader account can submit or update the team entry. Other members can view the workspace but will not see the submission form.
- The leader supplies both a Google Drive document link and the GitHub source repository link, then selects Submit project links. The portal confirms when it saves successfully.
- Ensure reviewers can open the Drive file and GitHub repository. Check sharing/access settings before submitting; the portal can save a link that reviewers cannot access.
- To correct a link, the leader signs in again, replaces it, and selects Update project submission. The latest saved links appear in the **Coordinator Login**

PUBLISHED SCHEDULE

The participant page lists the final submission deadline as 11 October 2026 at 09:30 AM. Follow any updated instructions issued by the organizers.

Admin guide | access & preparation

Use the coordinator portal to configure access before participants begin.

1. OPEN THE COORDINATOR DASHBOARD

- From the portal landing page, choose Coordinator Login. On phones, the button is at the top of the event page.
- Enter the admin password provided privately by the event owner and choose Open dashboard. Do not include the password in this handoff, spreadsheets, or participant messages.

2. SET THE ACCESS SCHEDULE

- Set a Start time and/or End time, then choose Save settings. Times are entered in your browser's local timezone. Use VIT Vellore / India Standard Time when planning the event.
- With a schedule set, the checkbox is a live status indicator. It turns on at the start and off after the end; it updates automatically while the dashboard is open.
- A start time without an end time opens access from that time onward. An end time without a start time keeps access open until that time.

3. PAUSE ACCESS ANY TIME

- Choose Pause access now to immediately block participant sign-in and submissions without changing the saved schedule. The status checkbox turns off while paused.
- Choose Resume access now to immediately return control to the saved schedule or manual setting. If the scheduled window is currently closed, resuming does not open it.
- Start/end edits and the manual Allow participant login checkbox are not applied until you choose Save settings. Pause/Resume access now applies immediately and does not require Save settings.
- Clear both date/time fields and save to return to manual mode. The Allow participant login checkbox controls the manual setting; Pause access now remains available.

SERVER-ENFORCED

The server checks the saved schedule and pause state for both participant login and submission updates. Access closes after the scheduled end even if the dashboard is closed.

4. RECOMMENDED ORDER

- Prepare team records, load problems, assign challenges, publish when authorized, then save the access schedule. Test a participant account. Use Pause access now for any mid-event pause; Resume access now returns to the current scheduled state.

Admin guide | teams & problems

Prepare accurate roster data before assigning challenges.

1. IMPORT OR CREATE TEAMS

- Choose Import teams in the Team Roster section. In the import dialog, download the team import template and use its header row. The portal accepts CSV or Excel workbooks.
- Include the team registration username, group leader name and register number, and each member name/register number. Other available registration fields can be retained from the template.
- Register numbers must be unique across participants. Review names, usernames, and team membership before importing; correct repeated or mismatched records in the source file.
- The import reports an error if the team data is invalid. Check the message and correct the source file before retrying. Confirm team and member counts in the roster afterwards.
- For a small correction or a single new team, choose Create team. Use Edit or the team detail panel to manage members, and Rename to change the team name.

2. LOAD PROBLEM STATEMENTS

- In Problem Library, choose Import questions to upload a question CSV, or choose Add problem to enter a title and statement manually.
- Use Edit to correct a title or statement. The library shows each problem ID; use the ID/title shown in the team assignment selector to confirm you choose the intended challenge.

AVOID CLEAR ALL

Clear all teams removes teams and their participants; clearing the problem library removes problem statements and team assignments; clearing submissions deletes saved links. These actions require repeated confirmation and cannot be undone from the portal.

Admin guide | assign & publish

Assignment and visibility are separate controls. Complete both before asking teams to refresh.

1. ASSIGN A PROBLEM TO A TEAM

- In Teams and assignments, find the team row and use its Problem selector to choose a problem ID/title. The selection saves immediately; the row reflects the current assignment.
- Choose Unassigned to remove an assignment. To distribute challenges across teams that do not yet have one, choose Randomly assign evenly; existing assignments are kept.

2. PUBLISH PROBLEMS FOR PARTICIPANTS

- In the Problem Library toolbar, use the single global visibility button. Enable all publishes every problem statement; Disable all hides every problem statement from participants.
- When every problem is enabled, the button reads Disable all. If any problem is disabled, it reads Enable all. There are no per-question visibility buttons.
- Publishing is global for the library. A team still needs a problem assigned. A team with an assigned but hidden problem will not see its text until problems are enabled.
- After assigning and publishing, ask already-signed-in participants to select Refresh challenge. A fresh sign-in also loads the current assignment.

RECOMMENDED RELEASE CHECK

Confirm the team row has the correct problem, use Enable all when ready to disclose statements, then test one participant login and verify the displayed title and statement before announcing release.

3. CORRECT A WRONG ASSIGNMENT

Return to that team row and select the correct problem. Confirm the new ID/title in the row. If the participant view is already open, have that team refresh its challenge.

Admin guide | submissions & checks

Review incoming work, verify links, and keep an export for the event record.

1. REVIEW INCOMING SUBMISSIONS

- The Team submissions panel lists submitted teams, Google Drive and GitHub links, and the last updated time. Open each link to verify it is the expected team deliverable and accessible to evaluators.
- The submitted count shows how many team submissions are currently saved. The dashboard refreshes its submission list periodically while open; reload the dashboard if you need to re-check current data.
- A team can update its links from the group leader account. Check the Updated time and open the latest links after a correction.

2. EXPORT AND RETAIN RECORDS

- Choose Download Excel in the Submissions panel to download hackathon-submissions.xlsx. Store the file in an approved organizer location with restricted access.
- Use Clear all only when intentionally deleting every saved submission. Export first if a record is needed; clearing does not provide a restore action.

3. PRE-EVENT COORDINATOR CHECKLIST

- Roster imports are complete; team usernames and participant register numbers have been checked.
- Every team has the intended problem assignment; publication is enabled when disclosure is authorized.
- A leader test account can sign in, see the correct challenge, and save both sample/approved links.
- Login window and submission cutoff are configured as intended and use the correct timezone.
- A coordinator is available to handle login, assignment, and link-access issues during the event.

DEADLINE OPERATIONS

The portal page advertises 11 October 2026 at 09:30 AM. The configurable Login window also controls whether login and submissions are accepted. Set its end time deliberately and test the chosen schedule in advance.

Quick help & safe use

Common symptoms, what to check first, and how to protect access and data.

PARTICIPANT: CANNOT SIGN IN

- Check the team registration username and your own register number against the organizer-provided roster. Ask the coordinator to correct a typo or missing participant record.
- If participant access has not started, has ended, or was turned off, ask the coordinator to check the Login window settings. Do not repeatedly retry unknown credentials.

PARTICIPANT: NO CHALLENGE APPEARS

- Select Refresh challenge once. If it still says Not published, ask the coordinator to verify both the team assignment and global Enable all publication setting.

PARTICIPANT: CANNOT SUBMIT

- Only the group leader can save links. Have the designated leader sign in and confirm both fields contain complete web URLs.
- Check that the access window is open. Confirm the Google Drive file and GitHub repository are accessible to the jury before resubmitting.

ADMIN: AN ACTION FAILS OR DATA WILL NOT LOAD

- Read the on-screen error. Re-check the admin password and input values; for team imports, fix duplicate register numbers or malformed rows in the source workbook.
- If a list fails to load, use Try again where shown. If the error persists, record the affected team/problem and time, then contact the portal operator.

SECURITY & DATA HANDLING

Use the portal over HTTPS. Keep the admin password private, sign out on shared devices, and limit access to downloaded roster/submission files. Never use Clear all as a refresh or troubleshooting step.

PORTAL LINK

Participant and administrator entry point: <https://vit-hackathon-portal.pages.dev/> | For urgent event-specific help, use the coordinator contact provided separately by the organizers.

ATTENDANCE COORDINATOR

One shared live status

for all coordinator laptops

All devices use the same attendance data saved by the portal.

Changes on one laptop appear on the others automatically, usually within 3 seconds.

01 Sign in on each laptop

Open the portal, choose Attendance Coordinator and use the shared coordinator password. Keep the attendance page open and connected to the internet on each device.

02 Check in on any device

Mark a participant present or absent on whichever laptop you are using. The update is saved on the server; you do not need to repeat it on other laptops.

03 Confirm that each page is current

Each open page refreshes from the server every 3 seconds. Check the Last synced time. A search filter only changes what that laptop displays; it never changes attendance.

If another laptop does not update

1. Check that it has internet access and that the attendance page is still signed in.
2. Look for an error message; reload the portal and sign in again if needed.
3. Wait a few seconds, then confirm its Last synced time has advanced.
